Information Sheet On-site VOC Venue Requirements

On-site VOC Assessment is a great way to reduce downtime and help your workers by having them tested on equipment that they are familiar with.*

In order for us to effectively assess your workers on site, there are a few basic requirements.

Plant and equipment

It is important that any machinery / equipment required in an assessment;

- Is in fully serviceable condition – free of faults and defects
- Is compliant – has legible data plates, current logbook, seat belt, warning devices, gas certification, scheduled maintenance etc. as required by law.
- Is correct for the application. For example, you will need the correct type of EWP available for each specific type of EWP being assessed.
- Has a readable Operators Manual present.
- Pallet racking is rated and certified (If required)
- Lifting equipment is defect free and in current test date
- Fall arrest harness/lanyard for any Boom lift training (with current inspection tag)

Machinery operating area

A clear operating area with sufficient space will be required for VOC assessments.

A suitable operating area should;

- Have adequate lighting in the operating area
- Be able to be isolated from nearby equipment and workers
- Have a suitable ground surface and suitable load-bearing capacity
- As much as possible be free of dangerous overhead and underground services
- Have safe access and egress to the area

Unsure?

Please remember that a VOC assessment is only possible for operators that already hold a qualification or licence, or can supply evidence of having undertaken formal training on the plant being assessed.

Feel free to contact us if you need some advice or have any questions. We look forward to working with you.

** It is the responsibility of the client to liaise with parties such as principal contractors etc. to ensure our assessors have the required site access to conduct assessments on the day.*
